The BMW Group is committed to sustainable principles and is therefore taking proactive measures to avoid certain chemicals in the production of our vehicles. Due to that only substances that are technically required in the product are still contained. The substances are incorporated in such a way that potential exposure to the customers is minimal, and dangers for the environment can be excluded as long as the vehicle and its parts are used as intended, and any repairs, servicing and maintenance are carried out following technical instructions for those activities, and industry standard good practices. Safe use of the product is described in the same manner that is consistent with our own commitment to promote the responsible manufacturing, handling and use of our products. Our information on repair and servicing of vehicles and genuine parts also includes safe use information for service personnel. An end-of-life vehicle may only be disposed of legally in the European Union at an Authorised Treatment Facility (ATF). Vehicle parts should be disposed in accordance with locally applicable laws and local authority guidance.

This product is composed of articles defined under Article 32(3) of the Regulation No. 1907/2006 of the European Parliament and the Council concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH). Any supplier shall comply with the duty to communicate information on substances in articles in accordance to Article 32. This applies, including any article that the product is composed of, does contain substances meeting the criteria in Article 57 and identified in accordance with Article 59(1) in a concentration above 0.1% by weight (w/w). We inform that lead (CAS-No. 7439-92-1) is used in almost all products category, primarily as alloying element. Recycled aluminum and metals may contain lead as impurity.

The information provided in this document related to material and substance content represents our knowledge and belief, which may be based in whole or in part on available information provided by suppliers to us. Additional Information: Certain inorganic oxides are bound in glass or ceramic matrices that change their individual substance properties as well as their communication duties under REACH. Similar changes occur in the REACH Annex XV Dossier.

**Name of substance meeting the criteria in Article 57 and identified in accordance with Article 59(1) in a concentration above 0.1% by weight by typical use according to the REACH Annex XV Dossier**

1. 2-[3-Methoxy-1-(2-methoxyethoxymethyl)pyrrolidin-2-yl]aniline (typically as additive in magnets for electronic assemblies)
2. 6,6'-Di-tert-butyl-2,2'-methylene-bis-cresol (typically for production of polymers and rubbers)
3. Dicyclohexyl phthalate (typically as plasticizer for production of polymers)
4. Dehydroporphyrazine (typically as dispersing agent in coatings, adhesives and paints)
5. Dodecamethylcyclohexasiloxane (typically as feedstock for the production of silicone polymers)
6. Silicic acid, lead salt (typically for production of glass and ceramics)
7. Diboron trioxide (typically for production of borsiclate and crystal glass)
8. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
9. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
10. Bisphenol (typically dispersing agent in coatings, adhesives and paints)
11. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
12. Silicic acid, lead salt (typically for production of glass and ceramics)
13. Diboron trioxide (typically for production of borsiclate and crystal glass)
14. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
15. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
16. Bisphenol (typically dispersing agent in coatings, adhesives and paints)
17. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
18. Silicic acid, lead salt (typically for production of glass and ceramics)
19. Diboron trioxide (typically for production of borsiclate and crystal glass)
20. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
21. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
22. Bisphenol (typically dispersing agent in coatings, adhesives and paints)
23. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
24. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
25. Bisphenol (typically dispersing agent in coatings, adhesives and paints)
26. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
27. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
28. Bisphenol (typically dispersing agent in coatings, adhesives and paints)
29. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
30. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
31. Bisphenol (typically dispersing agent in coatings, adhesives and paints)
32. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
33. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
34. Bisphenol (typically dispersing agent in coatings, adhesives and paints)
35. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
36. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
37. Bisphenol (typically dispersing agent in coatings, adhesives and paints)
38. Dodecamethyltetrasilsesquioxane (typically as feedstock for the production of silicone polymers)
39. Dicyclohexyl phthalate (typically for production of polymers and rubbers)
40. Bisphenol (typically dispersing agent in coatings, adhesives and paints)

**Location of article containing the substance in the product (Detailed, including optional equipment)***
