The BMW Group is committed to sustainable principles and is taking proactive measures to avoid certain chemicals in the production of its vehicles. Due to that only substances that are technically required do contain substances meeting the criteria in Article 57 and identified in accordance with Article 59(1) in a concentration above 0.1% weight by weight (w/w). We inform that lead (CAS-No. 7439-92-1) is used in several products or products categories, primarily as softening agent for polyethylene and alloys. A list of products does not contain substances meeting the criteria in Article 57 and identified in accordance with Article 59(1) in a concentration above 0.1% weight by weight (Typical use according to the REACH Annex XV Dossier).

The information provided in this document is based on available information provided by suppliers to us. Any supplier who complies with the duty to communicate information on substances in accordance with Article 33. This product includes only articles that the product is composed of, does contain substances meeting the criteria in Article 57 and identified in accordance with Article 59(1) in a concentration above 0.1% weight by weight (Typical use according to the REACH Annex XV Dossier). Please refer to the end of life vehicle management guide for additional information, including safe use information for service personnel. An end-of-life vehicle may only be disposed of in the European Union at an Authorised Treatment Facility (ATF).

Location of article containing the substance in the product (Detailed, including optional equipment): See [vehicle parts list]

2-Methyl-1-(4-methylthiophenyl)-2-morpholinopropan-1-one (typically used in coatings, paints and varnishes)

1,3-Propanesultone (typically as electrolyte in batteries)

Dodecamethylcyclohexasiloxane (typically as feedstock for the production of silicone polymers)

Silicic acid, lead salt (typically for production of glass and ceramics)

Diboron trioxide (typically for production of bismuthate and crystal glass)

Dicyclopentadienone (typically as feedstock for the production of silicone polymers)

2,3-dibromo-1-propanol, 2,3-DBPA (typically as an intermediate in the manufacture of phthalic anhydride)

Cobalt(II) nitrate hexahydrate (typically as additive in magnets for electronic assemblies)

1,4-Benzenedicarboxaldehyde (typically as feed stock for the production of cellulose acetate)

Hexahydro-4-methylphthalic anhydride (typically for production of resins and polymers)

Silica gel (typically as adsorbent in preparation of coatings, paints and varnishes)

Magnetite (typically for production of magnets, coating products, adhesives and sealants)

2-Trichloro-1,1,1-trifluoro-1,1-dichloroethane (typically used inlacquers, varnishes, and other coatings)

Hexahydro-4-methylphthalic anhydride (typically for production of resins and polymers)

1,4-Benzenedicarboxaldehyde (typically as feedstock for the production of cellulose acetate)

2-Methyl-1-(4-methylthiophenyl)-2-morpholinopropan-1-one (typically used in coatings, paints and varnishes)

1,3-Propanesultone (typically as electrolyte in batteries)

Dodecamethylcyclohexasiloxane (typically as feedstock for the production of silicone polymers)

Silicic acid, lead salt (typically for production of glass and ceramics)

Diboron trioxide (typically for production of bismuthate and crystal glass)

Dicyclopentadienone (typically as feedstock for the production of silicone polymers)

2,3-dibromo-1-propanol, 2,3-DBPA (typically as an intermediate in the manufacture of phthalic anhydride)

Cobalt(II) nitrate hexahydrate (typically as additive in magnets for electronic assemblies)

1,4-Benzenedicarboxaldehyde (typically as feed stock for the production of cellulose acetate)

Hexahydro-4-methylphthalic anhydride (typically for production of resins and polymers)

Silica gel (typically as adsorbent in preparation of coatings, paints and varnishes)

Magnetite (Typically for production of magnets, coating products, adhesives and sealants)

2-Trichloro-1,1,1-trifluoro-1,1-dichloroethane (typically used inlacquers, varnishes, and other coatings)

Hexahydro-4-methylphthalic anhydride (typically for production of resins and polymers)

1,4-Benzenedicarboxaldehyde (typically as feedstock for the production of cellulose acetate)

2-Methyl-1-(4-methylthiophenyl)-2-morpholinopropan-1-one (typically used in coatings, paints and varnishes)

1,3-Propanesultone (typically as electrolyte in batteries)

Dodecamethylcyclohexasiloxane (typically as feedstock for the production of silicone polymers)

Silicic acid, lead salt (typically for production of glass and ceramics)

Diboron trioxide (typically for production of bismuthate and crystal glass)

Dicyclopentadienone (typically as feedstock for the production of silicone polymers)

2,3-dibromo-1-propanol, 2,3-DBPA (typically as an intermediate in the manufacture of phthalic anhydride)

Cobalt(II) nitrate hexahydrate (typically as additive in magnets for electronic assemblies)

1,4-Benzenedicarboxaldehyde (typically as feed stock for the production of cellulose acetate)

Hexahydro-4-methylphthalic anhydride (typically for production of resins and polymers)

Silica gel (typically as adsorbent in preparation of coatings, paints and varnishes)

Magnetite (Typically for production of magnets, coating products, adhesives and sealants)

2-Trichloro-1,1,1-trifluoro-1,1-dichloroethane (typically used inlacquers, varnishes, and other coatings)

Hexahydro-4-methylphthalic anhydride (typically for production of resins and polymers)

1,4-Benzenedicarboxaldehyde (typically as feedstock for the production of cellulose acetate)

2-Methyl-1-(4-methylthiophenyl)-2-morpholinopropan-1-one (typically used in coatings, paints and varnishes)

1,3-Propanesultone (typically as electrolyte in batteries)

Dodecamethylcyclohexasiloxane (typically as feedstock for the production of silicone polymers)

Silicic acid, lead salt (typically for production of glass and ceramics)

Diboron trioxide (typically for production of bismuthate and crystal glass)

Dicyclopentadienone (typically as feedstock for the production of silicone polymers)

2,3-dibromo-1-propanol, 2,3-DBPA (typically as an intermediate in the manufacture of phthalic anhydride)

Cobalt(II) nitrate hexahydrate (typically as additive in magnets for electronic assemblies)

1,4-Benzenedicarboxaldehyde (typically as feed stock for the production of cellulose acetate)

Hexahydro-4-methylphthalic anhydride (typically for production of resins and polymers)

Silica gel (typically as adsorbent in preparation of coatings, paints and varnishes)

Magnetite (Typically for production of magnets, coating products, adhesives and sealants)

2-Trichloro-1,1,1-trifluoro-1,1-dichloroethane (typically used inlacquers, varnishes, and other coatings)

Hexahydro-4-methylphthalic anhydride (typically for production of resins and polymers)

1,4-Benzenedicarboxaldehyde (typically as feedstock for the production of cellulose acetate)

2-Methyl-1-(4-methylthiophenyl)-2-morpholinopropan-1-one (typically used in coatings, paints and varnishes)

1,3-Propanesultone (typically as electrolyte in batteries)

Dodecamethylcyclohexasiloxane (typically as feedstock for the production of silicone polymers)

Silicic acid, lead salt (typically for production of glass and ceramics)

Diboron trioxide (typically for production of bismuthate and crystal glass)

Dicyclopentadienone (typically as feedstock for the production of silicone polymers)

2,3-dibromo-1-propanol, 2,3-DBPA (typically as an intermediate in the manufacture of phthalic anhydride)

Cobalt(II) nitrate hexahydrate (typically as additive in magnets for electronic assemblies)

1,4-Benzenedicarboxaldehyde (typically as feed stock for the production of cellulose acetate)
