The BMW Group is committed to sustainable principles and is therefore taking precautionary measures to avoid certain chemicals in the production of our vehicles. Due to that only substances that are technically required in the product are still contained. The substances are incorporated in such a way that potential exposure to customers is minimised, and danger for humans or the environment can be excluded as long as the vehicle and its parts are used as intended, and any repairs, servicing and maintenance are carried out according to technical instructions for those activities, and industry standard good practices. Safe use of the product is described in the owner manual. As such, we hereby confirm that the remaining substances contained in the vehicle and genuine parts also include safe use information for service personnel. An end-of-life vehicle may only be disposed of legally in the European Union at an Authorised Treatment Facility (ATF). Vehicle parts should be disposed in accordance with locally applicable laws and local authority guidelines.

Communication of information according to Article 33 REACH

The product is composed of substances listed in Article 33 of the Regulation No. 1907/2006 of the European Parliament and the Council concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH). Any supplier shall comply with the duty to communicate information on substances in accordance to Article 33. This product includes all the substances listed in Appendix V of the REACH Annex XV Dossier. The information provided in this document related to material and substance content represents our knowledge and belief, which may be based in whole or in part on available information provided by suppliers to us.

**Names of substances meeting the criteria in Article 57 and identified in accordance with Article 58:**

1,2-Diethoxyethane, ethylene glycol dimethyl ether, EGDMEE (typically as process solvent and for surface treatment)

2,3-Dibromo-1-propanol, 2,3-DBPA (typically as an intermediate in the manufacture of polyethylene terephthalate)

2-Ethylhexyl 10-ethyl-4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4-stannatetradecanoate, Octadecane-1,2-dicarboxamide, ACDA (typically as blowing agent in plastic and rubber manufacturing)

6,6’-Di-tert-butyl-2,2’-methylene-di-p-cresol (typically for production of polymers and rubbers)

2-Methyl-1-(4-methylphenyl)-1-morpholinopropan-2-one (typically in coatings, paints and fillers)

2,4-Methylenebisoctylamine, MBDOA (typically as hardener in epoxy resins and for production of adhesives)

Lead monoxide, lead oxide (typically as constituent of electronic components)

Silicon, silicon dioxide (typically for production of glass and ceramics)

Diboron trioxide (typically for production of borosilicate and glass crystal)

Boric acid, boric acid (typically for production of glass and ceramics and as flame retardant)

Decamethylcyclopentasiloxane (typically as feedstock for the production of silicone polymers)

Dodecamethylcyclohexasiloxane (typically for production of silicone polymers)

Hexadecane-2-ethynylhomo-2-(1-oxa-1,1,2,3,4,5-hexahydropyrrole-1,3-dione), Isodiazole-2-thione (typically for production of polymers and rubbers)

Decamethylcyclopentaasiloxane (typically as feedstock for the production of silicone polymers)

Dodecamethylcyclohexasiloxane (typically as feedstock for the production of silicone polymers)

Oxamidocyclododecane (typically as heat insulation)

2-Hydroxy-2,3-dimethyl-4-vinylphenol, vinylphenol (typically for production of UV-absorbing polymers and coatings)

Melamine (typically used in coatings, inks, resins and polymers)

Aluminosilicate Refractory Ceramic Fibres (typically for heat insulation)

Phenylboronic acid, phenylboronic acid (typically as flame retardant in polyethylene)

Potassium 1,12,22,3,3,4,4,4-nonafluorobutane-1-sulfonate (typically as flame retardant in polyurethane)
